COLLEGE	GANESH COLLEGE OF ENGINEERING
TEAM ID	NM2023TMID00976

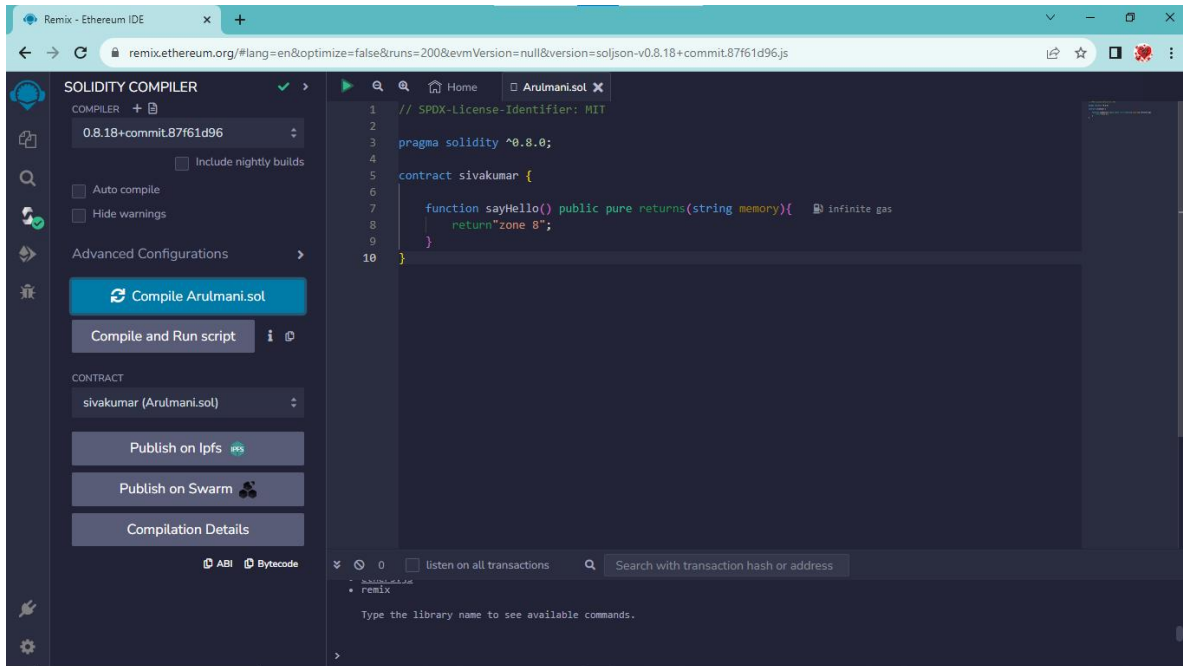

1.Go to the chrome and open remix platform

2.Open the remix page and create a new file

3. In that newly created file, create a program to return your string, "Zone name"

PROGRAM:

```
// SPDX-License-Identifier: MIT
pragma solidity ^0.8.0;
contract arulmani {
    function getZoneName() public pure
    returns (string memory) {
        return "Zone name";
    }
}
```

4. Save the program and compile it to get the ABI and Bytecode

```
[
  {
    "inputs": [],
    "name": "sayHello",
    "outputs": [
      {
        "internalType": "string",
        "name": "",
        "type": "string"
      }
    ],
    "stateMutability": "pure",
    "type": "function"
  }
]
```

5.Finally Deploy it to display the output

The screenshot displays the Remix Ethereum IDE interface. The top panel shows the Solidity code for a contract named 'sivakumar' with a function 'sayHello' that returns the string 'zone 8'. The middle panel shows the 'DEPLOY & RUN TRANSACTIONS' sidebar with the contract deployed at address 0xD91...39138. The bottom panel shows the 'Deployed Contracts' section with the 'sayHello' function button. The right panel shows the transaction details for the 'sayHello' function call, including the execution cost (715 gas) and the decoded output ('zone 8').
